

ReLife® LawnPlay rubber tile

GreenMatter ReLife® LawnPlay rubber tiles offer certified fall protection according to EN-1177:2018 up to a height of 2.10 metres. The tiles are designed for use under playground equipment and swings. The tiles are characterised by royal perforations, allowing rainwater to be absorbed directly into the soil and therefore be utilised for natural vegetation. Filling the openings with soil and grass seed results in greenery between the tiles, creating not only a safe, but also an ecological surface for playgrounds.

With the GreenMatter Relife® LawnPlay rubber tile, the rubber from artificial grass pitches is given a third life because the infill rubber consists of 100% recycled rubber granulate that was extracted from worn-out vehicle tyres. An exceptionally sustainable solution!

A glance of the advantages

- Certified fall height up to 2.10 metres
- Stimulates natural vegetation
- 100% recyclable

Technical specifications

Format	Thickness	Fall height*	Weight
1000 x 500	45 mm	2,0 m	10,6 kg
1000 x 500	65 mm	2,1 m	15,3 kg
Dimension variance	Length en width +/- 2% , Thickness +/-5%		
Weight variance	+/- 5%		
Material composition	Recycled rubber granulate bonded with PU binder.		
Surface structure	Sides with royal perforations.		
Colour	Black		
Certification	TÜV certified in accordance with the European standard EN-1177:2018.		
REACH	According to entry 50 Annex xvii of the REACH Regulation, to be applied in situations where frequent skin contact is possible or as a surface on which children play regularly.		

* Maximum permissible fall height per tile thickness (HIC value).
